

## Fork Positioner for Forklift

Forklift Fork Positioner - A fork positioner is actually a tool constructed out of high quality materials meant to withstand the most demanding procedures and work environments. This particular piece of equipment enables the person driving to work the blades hydraulically without leaving the seat. Side shifting units have the extra ability to laterally position the entire load or the arms in order to facilitate more accurate carrying and placement in a quicker and more efficient manner.

The only one of its kind fork pocket design could enable operators to be able to safely swing the unit's blades without any fear of damaging the positioning cylinders. This can allow the worker the choice to either perform simultaneous or independent fork movement, dependent upon the job requirement. For most forklifts with non-OEM carriages, complete carriages are needed. Standard OEM carriages could be converted into blade positioners on available units.
